ATM RABBIT MAB

货号: N261751

产品全名: ATM 兔单克隆抗体

基因符号 ATM; Serine-protein kinase ATM; Ataxia telangiectasia

mutated; A-T mutated

UNIPROT ID: Q13315

背景: The protein encoded by this gene belongs to the PI3/PI4-kinase family. This protein is an important cell cycle checkpoint kinase that phosphorylates; thus, it functions as a regulator of a wide variety of downstream proteins, including tumor suppressor proteins p53 and BRCAI, checkpoint kinase CHK2, checkpoint proteins RAD17 and RAD9, and DNA repair protein NBS1. This protein and the closely related kinase ATR are thought to be master controllers of cell cycle checkpoint signaling pathways that are required for cell response to DNA damage and for genome stability.
