CD63 (DMC425) IGG1 CHIMERIC MAB

: 28219

: CD63(DMC425) IgG1 Chimeric

CD63 antigen;Granulophysin;LAMP-3;Limp1;Melanoma-associated antigen ME491;OMA81H;Ocular melanoma-associated antigen;Tetraspanin-30;Tspan-30

: CD63 antibody(DMC425) IgG1 Chimeric

: The protein encoded by this gene is a member of the transmembrane 4 superfamily; also known as the tetraspanin family. Most of these members are cell-surface proteins that are characterized by the presence of four hydrophobic domains. The proteins mediate signal transduction events that play a role in the regulation of cell development; activation; growth and motility. The encoded protein is a cell surface glycoprotein that is known to complex with integrins. It may function as a blood platelet activation marker. Deficiency of this protein is associated with Hermansky-Pudlak syndrome. Also this gene has been associated with tumor progression. Alternative splicing results in multiple transcript variants encoding different protein isoforms.

: Flow Cyt

: Flow Cyt 1:100

: Rabbit

: Rabbit:Human Fc chimeric IgG1

: Purified from cell culture supernatant by affinity chromatography

: CD63

: Lyophilized from sterile PBS, pH 7.4. 5 % – 8% trehalose is added as protectants before lyophilization.

: Store at -20ºC to -80ºC for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80ºC (Avoid repeated freezing and thawing).
Figure 1. CD63 protein is highly expressed on the surface of Expi293 cell membrane. Flow cytometry analysis with Anti-CD63 (DMC425) on Expi293 cells transfected with human CD63 (Blue histogram) or Expi293 transfected with irrelevant protein (Red histogram), and Isotype antibody on Expi293 transfected with irrelevant protein (Orange histogram).
