

Product Description

Pioneering GTPase and Oncogene Product Development since 2010

HUMAN CD305 PROTEIN, HFC TAG

货号: 11746 产品全名: 人 CD305 蛋白 规格: 10/50/100 µg 基因符号 CD305;LAIR-1 目标蛋白: CD305

UNIPROT ID: Q6GTX8

描述: Recombinant human CD305 protein with C-terminal human Fc tag

背景: The protein encoded by this gene is an inhibitory receptor found on peripheral mononuclear cells, including natural killer cells, T cells, and B cells. Inhibitory receptors regulate the immune response to prevent lysis of cells recognized as self. The gene is a member of both the immunoglobulin superfamily and the leukocyte-associated inhibitory receptor family. The gene maps to a region of 19q13.4 called the leukocyte receptor cluster, which contains at least 29 genes encoding leukocyteexpressed receptors of the immunoglobulin superfamily. The encoded protein has been identified as an anchor for tyrosine phosphatase SHP-1, and may induce cell death in myeloid leukemias. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jan 2014] 物种/宿主: HEK293

分子量: The protein has a predicted molecular mass of 41.36 kDa after removal of the signal peptide.

分子特征: CD305 (GIn22-Y165) hFc(Glu99-ALA330)

纯化: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

储存和运输: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
