

HUMAN PSCA PROTEIN, HFC TAG

货号: 11204

产品全名: 人 PSCA 蛋白

规格: 10/50/100 µg

基因符号 PSCA;NQ206;RO232

目标蛋白: PSCA

UNIPROT ID: O43653

描述: Recombinant human PSCA protein with C-terminal human Fc

背景: This gene encodes a glycosylphosphatidylinositol-anchored cell membrane glycoprotein. In addition to being highly expressed in the prostate it is also expressed in the bladder, placenta, colon, kidney, and stomach. This gene is up-regulated in a large proportion of prostate cancers and is also detected in cancers of the bladder and pancreas. This gene includes a polymorphism that results in an upstream start codon in some individuals, this polymorphism is thought to be associated with a risk for certain gastric and bladder cancers. Alternative splicing results in multiple transcript variants.

物种/宿主: HEK293

分子量: The protein has a predicted molecular mass of 34.4 kDa after removal of the signal peptide. The apparent molecular mass of PSCA-hFc is approximately 40-57 kDa due to glycosylation.

分子特征: PSCA(Leu12-Ser86) hFc(Glu99-Ala330)

纯化: The purity of the protein is greater than 95% as determined by SDS-PAGE and Coomassie blue staining.

Formulation & Reconstitution: Lyophilized from nanodisc solubilization buffer (20 mM Tris-HCl, 150 mM NaCl, pH 8.0). Normally 5% – 8% trehalose is added as protectants before lyophilization.

储存和运输: Store at -20°C to -80°C for 12 months in lyophilized form. After reconstitution, if not intended for use within a month, aliquot and store at -80°C (Avoid repeated freezing and thawing). Lyophilized proteins are shipped at ambient temperature.
